GREY 32161

#6265208

Woodgard® colours are translucent to allow the natural beauty of wood grain to show through. The original colour of the wood will impact the finishing colour. Standard colours can be intermixed in any proportion to achieve desired colour. Users should become familiar with the colour by practicing on well-prepared scrap timber of the same type as is to be treated.

Dulux products for wood care have been specially developed to offer a high quality range that will provide a quality finish for your wood.

SA CARELINE: 0860 330 111

Safety and Technical datasheet available at www.dulux.co.za or on request.

Colour swatch references are accurate as modern printing will allow. For best colour and sheen consistency, it is advisable to use containers from the same batch number. In the case of different batch containers it is recommended that they be mixed together in a large container before use.
